## Specialised Staffing & Recruitment

We provide customised staffing solutions to our clients of every size through eminent customer service. We offer an exhaustive range of hiring services including that on a full-time basis, on a contract basis, or on a contract to hire basis.

During our hunt for a full-time employee, we conduct detailed background checks and profile matching. Apart from this, we also offer recruitment services to our clients looking to hire people for a temporary period of 3 months or 6

## OUR EXHAUSTIVE SERVICES

### Enterprise Resource Planning (ERP)

Enterprise Resource Planning is basically a series of software that organisations use to oversee regular business activities like accounting, procurement, risk management and compliance, project management, and chain supply operations. A proper ERP series involves an enterprise performance management software, which enables to make a plan, predict, budget, and report on an organisation's financial implications.

Our Enterprise group of products like HRMS, CRM, F&A can be posited off-shelf and our ERP for manufacturing and trading solutions can be easily deployed in your enterprise with the least amount of customisation. We also provide custom application's development for any enterprise requirements. We offer implementation of ERP Solutions across a variety of industries comprising Retail, Healthcare, Finance, Manufacturing, Banking, Education, and Insurance.

As Enterprise Resource Planners, we transform the strategic objectives and business vision of an enterprise into an achievable layout for business and IT change processes. We make organisations initiate their Enterprise application, working closely with the business management and IT to understand the business drivers and daily operation and how this needs to be displayed in the Enterprise Architecture. We work in a collective manner with key client operating teams to understand their

## CUSTOMER RELATIONSHIP MANAGEMENT (CRM)

Zintzotek has always stood up for healthy Customer Relationship Management to group processes, grow customer relationships, elevate sales, better customer service, and upsurge profitability. Our massive group of products possess a vital importance in enabling businesses regulate a broad range of business processes. This involves customer data, sales automation, customer support, resource management, and lead management.

With the help of our products we are prepared to enable you in the management of all these aspects in a seamless manner with an inherently prepared and feature-rich tool that is easy to use at the same time.

## Computerised Maintenance Management Systems(CMMS)

Computerised Maintenance Management System is a computerised system that streamlines the management of various tasks and operations. It is an important activity conducted to assure that your machines operate at their highest efficiency every time. CMMS is a very important activity for any organisation. It possesses a lot of benefits with itself.

Regardless of what kind of equipment we have, we perform a certain routine for their maintenance. Regularly scheduled maintenance not only results in longer equipment life but also lesser equipment purchases and replacements. A CMMS software enables a reduction in the unexpected repair costs by allowing us to view the repairs made to equipment during its entire life. This lets us decide if the component should be replaced or not.

CMMS Software alarms us if any part of a machine requires to be ordered, that too before a machine breaks down, thereby reducing downtime. CMMS is, therefore, a great asset for organisations by providing the possibility of acquiring less downtime, increased productivity, and longer equipment life.

With our machine maintenance products, our clients can conduct regular preventive maintenance to defend against the continued loss of productivity due to machine breakdown.

## Artificial intelligence (AI)

Artificial Intelligence(AI) is the replication of human intelligence processes by using machines, particularly computer systems. Some of the most crucial applications of AI include expert systems, machine vision, and speech recognition. With maximum companies waking up to the power of Artificial Intelligence, it has become extremely crucial to integrate it into their technology infrastructure to further expand their business objectives and stay competitive.

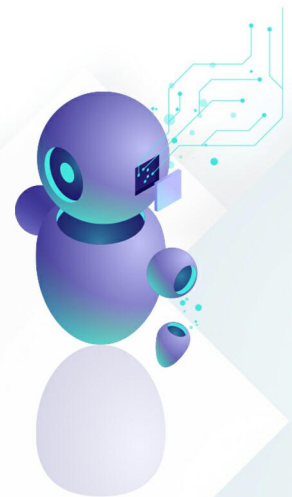

With a supremely qualified team that brings deep expertise in AI, Zintzotek's AI handout is designed to offer extensive AI functionality to clients so that they always remain ahead in the current trend.

## Robotic Process Automation (RPA)

Robotic Process Automation is the process of use of software with artificial intelligence and machine learning abilities to manage huge sizes of repetitive tasks that formerly needed humans to work on. Today, robots are proficient in facilitating the automation of simple, repetitive processes. They can also be made so as to manage a suite of far more complex tasks.

We help our clients automate their repetitive business processes on a 24/7 basis and that too in an error free manner. These mundane tasks include huge calculations, queries, preservation of records and transactions.

There is no need for any large scale systems integration to implement RPA. We do this without any re-engineering business processes, without disturbing any existing systems and applications. We make use of UiPath, a leading RPA vendor that allows for an automation first approach through a combination of built-in, customisable, shareable activities, and deep integrations with ERP. Uipath software solution enables automation of repetitive office work. It uses multiple tools to convert the monotonous tasks into an automation process. Hosted in cloud environments, it offers a broad range of application to work with.

## AR/VR Development

Build smart AR/VR solutions which will enhance the experience of smartphone users. As an offshore AR/VR application development company, we develop versatile AR/VR solutions at a reasonable price while optimizing time. We build next-generation virtual and augmented reality apps which will bring value to your business with improved efficiency and accuracy.

We render custom AR/VR app development services and deliver apps for all industry verticals so as to supply benefits with reduced operational cost, increased productivity and potential

## Game Development

The games like Slots, Bingo Live, Poker, Jungle Jumping Kid, Catch the Bull and Tyga, Our experienced mobile game developers always aims to attend the project details carefully and thoroughly to support the ideas as in details for character development, graphic design, level design, game testing, mathematics and coding.

We focus on generalized simulations, bracing and brief graphics, soothing sounds and engaging visuals to bring the life to just a game idea. We exercised to target and involve audience from almost every age-group, their targets to increase the market view and wider market acceptance.

The neck to neck competition and distributed challenges and various choices among the sport development company and industries, however what makes U.S. recommendable is bridging the gap between the shoppers and developers, non-negotiable space for the standard of games, the sole space exists wherever we tend to keep our client's needs at higher stakes, the most important measures that we tend to order to stay the shoppers intact are

- ◆ CONFIDENTIALITY      ◆ COST      ◆ CLOSURE TO PROJECT
- ◆ CHARTBUSTER      ◆ QUALITY      ◆ MARKETING
- ◆ PLATFORM DEPENDENCY      ◆ CLIENT SUPPORT

## OUR KEY FEATURES

## Optimise Organisational Performance

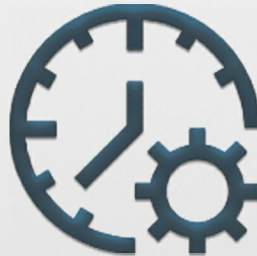

At Zintzotek, we have continuously laid emphasis on the fact that employees are the biggest assets for any organisation. ## INSIGHT ON OUR INDUSTRIES

### Manufacturing

In today's competitive world, finding skilled workforce has become quite challenging for companies. This has led to an increased demand for self-service applications and the advent of technologies such as AI, automation, IoT, etc.

We realise this and provide end to end support to manufacturers from helping them access the most suitable talent to executing complex projects, providing several types of engineering services, and delivering entire IT projects independently.

### Oil and Gas

One of the most slowest industries, the oil and gas is facing very stringent regulations and intense growth challenges due to the emergence of new sources of energy. In this framework, cloud computing, IoT, and many other such technologies carry the potential to bring about a transformation.

This is where we at Zintzotek come to the rescue by providing the right synchrony of talent and technology to companies for them to gain a competitive edge.

### Banking & Finance

Stringent rules, compliance requirements, cyber threats, competition from financial technology companies, growing demands of customers, and many more such hindrances occur in the functioning of banking and financial services.

Zintzotek provides real-time technological solutions for all these challenges so as to execute all the complex processes in the most seamless manner.

### Retail

Retail industry has been one by far the most innovative industry to have seen the maximum transformation, be it how the retailers source their products, how they sell them, how they market themselves, or how they engage with customers. These all changes have brought about by technology.

At Zintzotek, we aim to bring the same transformation in your business by leveraging our technology to make you speed up your business' pace.

### Telecom

The OTT services are imposing severe pressure on the telecom industry in terms of bandwidth and earning opportunities. Given the current advancements going on such as 5G, the telecom players would have to gear up to meet the same through alterations in their technology infrastructure.

Zintzotek endeavours to meet this demand of yours through efficient technology solutions. Our team of professionals have proven experience in the same to in the most coherent manner.

### Construction

Information Technology has been adopted in the construction industry comparatively late than the other industries. Despite this, technologies such as analytics, AR/VR,etc. have been brought up in the past few years, which holds a potential of bringing transformation in this industry.

We make the best use of these technologies so that you do not lag behind your competitors by any means.

### Wholesale & Distribution

With the growing popularity of e-commerce, the wholesalers and distributors are moving online for B2B business. Realising the importance of e-commerce, it is high time that companies invest in related technologies.

Zintzotek works to provide you the best technological solutions that meet all your Demands to keep up in this inevitable competition of e-commerce business.
